

Transferring script files to the app in iTunes (V2.1 of the app...available mid July 2010)

Connect your phone or pod to a computer that has iTunes installed. You may need to sync your device w/ iTunes for the app to show up.

1. Select the device in iTunes (see below).
2. Select the Apps tab.
3. (Scroll all the way down), then you will see a list of apps that can share files with iTunes...click the app (such as HollywoodHelper in our case).
4. Click Add...you will be prompted for the file you want to add to the app's Documents directory.
5. At this time, it is not a good idea to mess with the clips and subtxts folders, or the app may not work properly.
